JULIEN GRIMAL

juliengrimal.com jeigi.solutions

Operations Consultant / Senior Architect / AI — 18 years of experience

julien.grimal@pm.me | +33 7 66 16 19 09 | Abjat, France | linkedin.com/in/juliengrimal

Experienced manager and architect, Operations and Technical Director with 18 years of experience, I combine software architecture, DevOps, security and organizational transformation. I recently designed AgentProtocol, an AI-assisted development foundation built on context engineering, skills, orchestration and agent control, then applied this specification-, test- and validation-driven approach to release an operational tool in four months. Former Group Git lead at Thales, I integrate these practices into CI/CD pipelines and turn them into standards suited to enterprise information systems.

INDUSTRIES

Pharma Banking & Insurance Energy
Defence Retail Manufacturing Oil & Gas
Telecom Consulting Startup / SaaS

QUALIFICATIONS

IT Security Engineer — TELECOM SudParis (2008)

French (Native) English (C2)

Key references: Sanofi — Thales — Meludia — L'Oréal — AXA — SFR — AON — GDF Suez — Société Générale — Natixis — Total — Safran

KEY SKILLS

AI
A2A, MCP, Agents & Skills, Context Engineering, Agent Harnesses, SDD, multi-agent orchestration, LLM APIs — Claude Code, Codex, OpenCode/Hermes

Architecture & Integration
High Availability, Distributed Systems, SOA, ESB, ETL, EAI, IaaS, PaaS, SaaS, Microservices

Cloud & Infra
AWS, Azure, GCP, Docker, Vagrant, VMWare, VirtualBox, Ansible, Chef, Puppet, Capistrano

Methodologies
Agile (Scrum, SAFe, Kanban), TOGAF, Lean Operations, COBIT

Backend & Servers
Python (Flask, FastAPI), PHP (Symfony), Node.js, C#, Shell, Perl, TCL, REST APIs, Apache, Nginx, IIS, Weblogic

Frontend & Mobile
JavaScript, TypeScript, Angular, HTML5, CSS3, XML, YAML, JSON, Ionic, iOS, Android, Unity

Data
MySQL, PostgreSQL, MongoDB, Redis, Oracle, Elasticsearch, Solr, Hadoop, NoSQL

DevOps & CI/CD
Git, Jenkins, GitLab, GitHub, Bitbucket, Stash, JIRA, Fastlane, Redmine

Security & Network
IAM, PKI, SSL/TLS, LDAP, ISO 27002, VPN, SSH, TCP/IP, DNS, DHCP, HAProxy, Varnish, Cloudflare, Route53, ufw

Monitoring & OS
Grafana, Telegraf, Nagios, *Nix, Windows, macOS

2008–2010 IT Security (Devoteam) → 2010–2013 Founder & Freelance → 2013–2016 Senior Architect (CGI) → 2016 Integration Consultant (Astrakhan) → 2016–2020 CTO→COO (Meludia) → 2020–2026 Freelance – 2026 Jeigi Solutions

KEY MISSIONS

Three key missions demonstrating operational and technical leadership

THALES — Group Git Expert & POC

2013–2016 | CGI Business Consulting

Writing the Group Software Configuration Management standard. Enterprise-wide migration from IBM GCL to Git across the Thales Group worldwide.

Key results:

- ✓ Group SCM standard written and deployed
- ✓ IBM GCL → Git migration guide
- ✓ Trainers trained worldwide (AU, DE, NO, UK, US…)
- ✓ Infrastructure design & consulting
- ✓ Git/Jira/Nexus/Jenkins best-practice guides
- ✓ Level 3 technical support

SANOFI — Lead Technical Architect

2013–2016 | CGI Business Consulting

Architecture definition for the European pharmaceutical traceability solution — serial number management for regulatory compliance across 400 factories worldwide.

Key results:

- ✓ HA architecture for 35B+ transactions/year
- ✓ Application and technical core-model definition
- ✓ TOGAF integration into Sanofi IS
- ✓ End-to-end performance testing strategy
- ✓ Deployment industrialization via Git

Stack: Oracle PSM, Oracle 11g RAC, Weblogic 11g, Git, Python

MELUDIA — CTO / COO

2016–2020 | B2C Music SaaS Platform

Critical transition for the company. Mandated to restructure, transform and reduce operational and technical costs, and deliver a new mobile application.

Key results:

- ✓ Azure→AWS migration: costs ÷5, capacity ×3
- ✓ Support outsourced, resolution time ÷3
- ✓ 60% technical debt reduction
- ✓ Recruited 6 tech profiles + 1 sales profile
- ✓ Mobile app delivered on time and on budget
- ✓ 15,000 users across 168 countries

Stack: Docker, MongoDB, MariaDB, Nginx, Node.js, Symfony, TypeScript, Ionic, Ansible, Grafana, Flask, FastAPI

THALES GROUP

Senior Consultant — Git Expert — CGI Business Consulting

2015

CONTEXT

Mandated as the sole Git reference for the entire Thales Group and worldwide point of contact on the subject. The mission covered writing the Group Software Configuration Management standard, defining the enterprise-wide migration strategy from IBM GCL to Git, creating comprehensive migration guides, designing infrastructure architectures, and providing training and level 3 technical support across all Thales entities worldwide.

CHALLENGES

Defining a single software configuration management standard across a global group, replacing a legacy tool (IBM GCL) with Git. Turning this standard into a concrete and operational methodology within a military-grade requirements context, supporting the migration of highly complex projects, and advising developers and project managers of a very high technical level.

RESULTS

- ✓ The Software Configuration Management standard was written and officially distributed across all Thales Group software engineering entities.
- ✓ A comprehensive migration guide from IBM GCL to Git was published and distributed to all software engineering teams.
- ✓ Train-the-trainer sessions delivered for Australian, German, Norwegian, British and American entities to ensure level 2 support at local scale.
- ✓ A technical reference baseline (infrastructure, tooling and environment) was delivered, serving as a standardized starting point for all projects.
- ✓ Best practice guides for implementing CI/CD architectures with Git/GitLab/Jira/Stash/Nexus/Jenkins were written.
- ✓ Level 3 technical support was provided on an ongoing basis. A successor was trained to ensure role continuity.

Stack: Git, Jira, Nexus, Jenkins, IBM GCL

SANOFI

Lead Architect - Senior Consultant — CGI Business Consulting

2014

CONTEXT

Support in defining and implementing an application core-model for managing drug serial number traceability. The core-model had to collect manufacturing data in real-time from 400 production sites, detect production anomalies and counterfeits, and notify health authorities, for over 35 billion transactions per year.

CHALLENGES

Integrating a standard solution into the Sanofi information system while adapting it following TOGAF principles, defining the integration strategy for all project phases, industrializing deployments via Git, and defining and executing end-to-end performance testing strategies. As the solution sat at the central point of contact with the entire Sanofi IS, security requirements were high. The project had to be delivered in 6 months with performance commitments, following an Agile methodology. As Lead Architect, I sized the solution, defined a Dev/Build/Test/Run strategy and managed environments throughout the project.

RESULTS

- ✓ Defined the application and technical core-model, covering the complete traceability cycle from manufacturing to health authority notification.
- ✓ Designed and validated a high-availability architecture for 35 billion transactions per year distributed across 400 factories worldwide.
- ✓ Integrated the solution into the Sanofi information system following the TOGAF enterprise architecture framework.
- ✓ Industrialized deployments via Git, with a complete deployment industrialization document.
- ✓ Defined and executed end-to-end performance testing strategies, validating the architecture under real load conditions.
- ✓ Defined business test cases and successfully completed acceptance testing.

Developed a Python scheduler to address a constraint related to the factories' data production mode.

Performance commitments were validated by the client and deadlines were met.

Stack: Oracle Pedigree & Serialization Manager 1.2, Oracle 11g RAC, Weblogic 11g, Oracle BI-Publisher 11g, Git, Python

MELUDIA

CTO / COO — Meludia

2016 – 2020

CONTEXT

Meludia is a startup offering a Gaming/E-Learning SaaS and Mobile platform centered on music, with both B2C and B2B focus. In a critical transition context after 7 years of existence, following a near-complete workforce reduction and capital re-injection, Meludia's founders mandated me to restructure, transform and reduce operational and technical costs, as well as deliver a new mobile application from specifications writing through to delivery.

CHALLENGES

- Maintain existing systems without a technical team.
- Reduce operational costs.
- Rebuild the technical team.
- Modernize processes.
- Evolve technologies.
- Automate.
- Ensure and extend solution load capacity.
- Build a mobile application.

Stack: Docker, MongoDB, MariaDB, Nginx, Node.js, Symfony, TypeScript, Ionic, Fastlane, Ansible, Grafana/Telegraf, Flask, FastAPI

RESULTS

- ✓ Translated business strategies into concrete operational plans, generating measurable improvements.
- ✓ Migrated from Azure to AWS, reducing costs by a factor of 5 and increasing load capacity by 3.
- ✓ Outsourced Customer Support solution and reduced average ticket resolution time by a factor of 3.
- ✓ Analyzed and built a backlog, then reduced technical debt on the legacy by 60%, and replaced 30% of the scope with new components.
- ✓ Implemented development best practices and an Agile methodology involving business and design at every stage.
- ✓ Recruited 6 technical profiles and 1 commercial profile.
- ✓ Redefined Design/Build/Run processes across the product chain.
- ✓ Outsourced Marketing and Support activities.
- ✓ Automated documentation generation, code coverage, testing, and production deployments.
- ✓ Recentralized and organized the company Knowledge Base.
- ✓ Supported the commercial team in implementing B2B client funnel tracking metrics and performance metrics tied to the product roadmap.
- ✓ Delivered a mobile application on Google Play Store and App Store, meeting time and budget commitments.
- ✓ Platform scaled to over 15,000 users across 168 countries.

NXTPOP

Operations Consultant — Freelance

2023 – 2026

CONTEXT

NXTPOP is a WEB3 solutions development agency focused on cryptocurrency. The mission consisted in building a tailored operational monitoring framework. Weekly operational follow-up of technical and marketing teams is provided, along with support for implementing an A/B Testing strategy.

CHALLENGES

The Blockchain and WEB3 universe constitutes an ecosystem of its own, with its own language and complex technology stacks (smart contracts, tokenomics, NFTs). The technologies involved were entirely unknown at the start of the mission. My consulting experience across diverse environments proved to be a major asset, enabling rapid upskilling and effective adaptation to this demanding technological ecosystem.

RESULTS

- ✓ CEO made autonomous across all his areas of responsibility through the implementation of a structured KPI and OKR tracking methodology.
- ✓ A comprehensive operational monitoring framework was designed and deployed for technical and marketing teams. Teams are tracked weekly and their tasks and backlogs are directly linked to company objectives.
- ✓ An A/B Testing strategy was successfully implemented to support data-driven decision making.

Stack: Web3, Blockchain

PaulineService.com

Operations Consultant — Freelance

2025 - 2026

CONTEXT

PaulineService.com is a personal services company. The mission consisted in designing, building and delivering a complete bilingual website (French/English) with a zero operating cost model.

CHALLENGES

Deliver a production website with zero operating costs, guaranteeing the client a complete absence of recurring infrastructure expenses.

RESULTS

- ✓ Built, delivered and deployed a bilingual website (EN/FR) available at https://paulineservice.com.
- ✓ Zero operating costs achieved.
- ✓ An evolution and deployment pipeline was automated.
- ✓ The platform was secured following web application security best practices.
- ✓ A microservices communication pipeline was deployed for contact forms and notifications.

BZV

IT Strategy Consultant — Freelance

2023

CONTEXT

BZV is a startup in its ideation phase. The mission consisted in supporting the founders in building solid and credible documents for investors: Exec Summary, Pitch Deck, market research, and launch strategy.

CHALLENGES

The objective was to equip the founders with all the strategic and business documents necessary to move from ideation to a structured launch, including investor-ready materials and a detailed operational roadmap.

RESULTS

- ✓ All necessary documents were generated and delivered: Exec Summary, Pitch Deck, detailed Business Plan and Operational Launch Plan.
- ✓ The founders were made autonomous and able to present themselves credibly to investors thanks to structured and professional documents.

L'ORÉAL GROUPE

Senior Integration & DevOps Consultant — Astrakhan Innovation Management

2016

CONTEXT

Two consulting missions at L'Oréal Group headquarters. The first consisted in defining the macro planning and various strategic phases of the global integration solution plan (ETI/SOA) for the next 3 years, as well as building the RFP for integrators and vendors, carried out in tandem with the CEO of Astrakhan Innovation Management. The second consisted in building a custom project management methodology framework for the group's development and engineering standard, combining Agile and Waterfall, in collaboration with Ernst & Young.

CHALLENGES

For the first mission: providing the Group CIO with a clear vision and a global integration plan structuring the next 3 years. For the second: producing a development methodology standard applicable across the entire group, reconciling Agile and Waterfall approaches within a specific and unified framework.

RESULTS

- ✓ The macro planning and strategic phases of the global integration plan (ETI/SOA) were defined and validated by the Group CIO.
- ✓ The RFP was built and sent to integrators and vendors, responses were evaluated and recommendations were provided to the selection committee.
- ✓ A custom project management methodology framework was produced, combining Agile and Waterfall, and validated as the group's development standard.

L'ORÉAL FRANCE

Senior Integration & DevOps Consultant — Astrakhan Innovation Management

2016

CONTEXT

Consulting mission for L'Oréal France focused on the complete mapping of information system flows. Following multiple solution integrations and successive evolutions, CISO needed to have a clear and controlled view of all application and data flows.

CHALLENGES

Producing a comprehensive and actionable mapping of all IS flows, enabling a consolidated view to steer future evolutions and secure control of the information system. The functional scope, being very broad, and the number of successive ESB solution integrations, involving heterogeneous concepts and formats, represented a significant undertaking in terms of technological diversity and interdependency complexity.

RESULTS

- ✓ A complete mapping of the information system flows was produced and delivered.
- ✓ Application and data flows were identified, documented and consolidated by major functional families.
- ✓ A flow scheduling map was produced.

AON / SFR

Senior Integration & DevOps Consultant — Astrakhan Innovation Management

2016

CONTEXT

Hired by Astrakhan Innovation Management as a DevOps expert, I was mandated to build a commercial offering on this scope. This offering led to two client missions: training several teams at AON and SFR in DevOps and SAFe (Agile project management methodology) methodologies.

CHALLENGES

Twofold: structuring and packaging a credible and differentiating commercial offering around DevOps for Astrakhan Innovation Management, and supporting client teams in the concrete adoption of these practices and methodologies within their organizations.

RESULTS

- ✓ The DevOps commercial offering was built, packaged and made available to Astrakhan Innovation Management's sales force.
- ✓ Several teams at AON and SFR were trained in DevOps and SAFe methodologies.

CENTQUATRE PARIS

Senior Integration & DevOps Consultant — Astrakhan Innovation Management

2016

CONTEXT

Coaching mission for CentQuatre Paris, a major Parisian cultural institution and artistic creation hub. One-to-one coaching was provided to the Chief Information Officer on IT and methodological topics, as well as preparation for his recurring participation in steering committee meetings to optimize the impact of his presentations.

CHALLENGES

Supporting the CIO in his communication and operational control of his scope, as well as in presenting and defending his topics before management during steering committee meetings.

RESULTS

- ✓ The CIO was coached on a recurring one-to-one basis on the structuring and presentation of his topics.
- ✓ Steering committee presentations were prepared and optimized to maximize their impact with management.
- ✓ Operational control of the IT scope was strengthened through structured follow-up.

AXA FRANCE

Project Manager & Developer — Freelance

2013

CONTEXT

PM mission for the integration and adaptation of an enterprise social network for AXA France. The objective was to adapt and deliver a corporate social network platform enabling internal collaboration, knowledge sharing and communication across teams and departments, with the goal of creating a "digital common sense guide" co-written by the entity's 3,000 employees.

CHALLENGES

Integrating and scaling a technical solution within a major insurance group, meeting enterprise-level security and scalability requirements while providing an intuitive user experience for employees across different business units.

RESULTS

The enterprise social network platform was integrated, adapted and delivered for AXA France internal use.

The platform enabled cross-department collaboration, knowledge sharing and internal communication.

The "digital common sense guide" was co-written by the entity's 3,000 employees and published.

SAFRAN NACELLES

Product Owner & Developer — Freelance

2012

CONTEXT

Design and development of a production KPI dashboard for Safran Nacelles, a leading aircraft-engine nacelle manufacturer. The application displayed factory production indicators and consolidated business data from multiple departments.

CHALLENGES

High security constraints specific to the aerospace and defense sector, involving strong restrictions on inter-department data transfers.

RESULTS

- ✓ The production KPI dashboard was developed and deployed on factory floor monitors.
- ✓ Business data from various departments was integrated while respecting inter-department security constraints.

ETAP

Infrastructure Auditor — Freelance

2012

CONTEXT

Infrastructure audit for Entreprise Tunisienne d'Activité Pétrolière. The mission involved a thorough assessment of the existing IT infrastructure to identify weaknesses, risks and improvement opportunities.

CHALLENGES

The objective was to deliver a comprehensive audit of the current IT infrastructure with actionable recommendations for modernization, security improvements and cost optimization.

RESULTS

- ✓ A comprehensive audit of the company's IT infrastructure was carried out, covering all critical IT systems and services.
- ✓ A detailed report with prioritized recommendations was delivered for infrastructure modernization and risk mitigation.

MELUDIA (Freelance)

Tech Strategy & Operations Coach — Freelance

2012 – 2013

CONTEXT

Interim CTO mission at one day per week for the Meludia startup, aimed at developing a music game based on automatic sound generation, player scoring, leaderboards and real-time statistics. The mission covered technical leadership (development best practices, Git code management strategies, technical recruitment, definition of development and deployment processes, test and deployment industrialization) as well as technical architecture (application and technical core-model definition, detailed architecture, solution industrialization).

CHALLENGES

Structuring the entire technical operations of a startup in its building phase, with a presence limited to one day per week, requiring efficiency and team autonomy between each intervention.

RESULTS

- ✓ Defined the application and technical core-model, and the detailed architecture.
- ✓ Defined development best practices and Git code management strategies.
- ✓ Recruited 5 technical profiles.
- ✓ Trained a CTO profile within the team to ensure role continuity.
- ✓ Defined development and deployment processes.
- ✓ Industrialized tests and deployments.

Wrote the deployment industrialization document.

Stack: Symfony2, PHP, JavaScript, Python, Git, Redmine, Node.js, Apache, MongoDB, Redis, Azure, AWS

FLUBBER

CTO & Co-Founder — Founder

2010 – 2013

CONTEXT

Definition, management and development of SaaS and mobile applications for business management (CRM, Expense Reports, CSR). The company built a portfolio of 12 web and mobile products targeting SMEs.

CHALLENGES

As CTO and co-founder, setting up all technical operations: specifications writing, recruitment, delivery and operational maintenance. The scope also covered management (business plan, business model, IT budget, Agile methodology, Scrum Master) and architecture (application and technical core-model, detailed architecture, deployment industrialization, development).

RESULTS

- ✓ A portfolio of 12 B2B SaaS ERP tools was built and delivered on web and mobile platforms.
- ✓ Defined the application and technical core-model for the entire product suite.
- ✓ Industrialized deployments with automated pipelines.
- ✓ Set up a knowledge management system to centralize technical and business documentation.
- ✓ Defined and applied an Agile methodology.
- ✓ Participated in business plan, business model and IT budget management throughout the company lifecycle.

Stack: Symfony2, PHP, JavaScript, Python, iOS, C++, C#, XAML, Android, Node.js, MySQL, Apache, MongoDB, Git, Redmine, Jenkins, Azure, AWS

LE MONDE APRÈS (OPENWORK)

CTO & Co-Founder — Founder

2010 – 2013

CONTEXT

Umbrella company managing 250 consultants. As co-founder and CTO, the mission covered IT strategy definition, specifications writing, POC development, vendor selection and definition of the company's information system.

CHALLENGES

Building complete business and technical specifications for an umbrella company platform, selecting the right solution vendors through RFPs, and overseeing all integration projects from selection to deployment.

RESULTS

- ✓ Built business (umbrella company) and technical specifications covering all operational workflows.
- ✓ Wrote and distributed technical specifications and RFPs to potential vendors.
- ✓ Vendor selection completed through a structured evaluation process.
- ✓ Tracked and delivered integration projects, establishing the company's central information system.

Stack: BPM, CMS

GDF SUEZ (ENGIE)

IT Security Consultant — CISO HQ Assistant — Devoteam Solutions

2010

CONTEXT

Support, assistance and monitoring of the HQ CISO's activities, responsible for projects across Group GDF Suez divisions. The mission covered ISMS implementation, security action plan management, audit management, and risk analysis validation.

CHALLENGES

Supporting ISMS deployment and monitoring, accompanying Group division projects from a security perspective, contributing to the Security Action Plan, managing security audits and reviews, and validating risk analyses submitted by project teams.

RESULTS

- ✓ ISMS implementation and monitoring across Group HQ divisions.
- ✓ Contribution and monitoring of the Security Action Plan, with CISO reporting.
- ✓ Management of security audits and reviews, ensuring compliance with group standards.
- ✓ Study and validation of risk analyses submitted by project teams.

CRÉDIT AGRICOLE

IT Security Consultant — Devoteam Solutions

2009

CONTEXT

Security project follow-up for the Workstation division of Crédit Agricole Group. The mission focused on redefining workstation packaging to integrate new collaborative work solutions deployed within the group, while ensuring compliance with security requirements.

CHALLENGES

Ensure ISMS compliance during the Group Workstation standard packaging.

RESULTS

✓ Continuous security compliance monitoring throughout the packaging project.

NATIXIS

IT Security Consultant — Devoteam Solutions

2009

CONTEXT

Writing operational security guides based on group security directives. The mission involved organizing workshops, conducting ISMS technical studies, and writing technical verification and operational security testing guides.

CHALLENGES

Translate group security directives into operational guides usable by IT teams, resulting in concrete tests.

RESULTS

- ✓ Wrote operational security guides, translating group directives into actionable technical procedures.
- ✓ Organized workshops to gather requirements and validate approaches with stakeholders.
- ✓ Wrote technical verification and operational security testing guides delivered to IT teams.

Stack: Symantec Endpoint Protection, Microsoft Exchange Server, Netasq

TOTAL

IT Security Consultant — Devoteam Solutions

2009

CONTEXT

Operational risk study and analysis regarding the deployment of a cross-functional solution across Total Group divisions. The mission involved organizing workshops with stakeholders, conducting an ISMS technical study, and producing a comprehensive risk analysis report with actionable recommendations.

CHALLENGES

Performing an Operational Risk Analysis associated with the deployment of a cross-functional solution across the group, identifying potential impacts, and delivering a detailed report with prioritized recommendations.

RESULTS

- ✓ Organized workshops with stakeholders from multiple group divisions to gather risk elements.
- ✓ Completed a comprehensive operational risk analysis, covering all aspects of the cross-functional deployment.
- ✓ Wrote a detailed risk analysis report with prioritized recommendations, presented and delivered to decision makers.

Stack: MOSS 2007

SOCIÉTÉ GÉNÉRALE

IT Security Consultant — Devoteam Solutions

2009

CONTEXT

Production of security dashboards, data aggregation and analysis for the Société Générale Group CIO. The mission involved aggregating data from multiple security data sources, analyzing security metrics, and creating executive-level dashboards aligned with COBIT and ISO 27002/27005 frameworks.

CHALLENGES

Providing the Group CIO with clear and actionable security visibility through dashboards aligned with industry standards (COBIT, ISO 27002/27005), by aggregating financial security data reported by all group entities.

RESULTS

- ✓ Designed and delivered security dashboards for the Group CIO.
- ✓ Aggregated data from multiple security data sources.
- ✓ Aligned dashboards with COBIT and ISO 27002/27005 compliance frameworks.

Stack: COBIT, ISO 27002/5

ADP GSI

IT Security Consultant — Devoteam Solutions

2008 – 2009

CONTEXT

Development of SOA-type processes and connectors for identity and access management of ADP GSI Group users. The mission involved building integration components for the group's IAM platform, including LDAP connector development and PKI implementation for user identity management.

CHALLENGES

Developing connectors enabling centralized identity and access management across the ADP GSI Group, integrating LDAP directories and PKI infrastructure for secure user authentication and authorization.

RESULTS

- ✓ Developed LDAP connectors and integrated them into the group's IAM platform.
- ✓ Implemented PKI components with OpenTrust for secure authentication.

Stack: BMC Calendra, LDAP, PKI OpenTrust, Perl, Tcl
